

Andromeda

Music Player for GNU/Linux systems.

Andromeda is a music player powered by Python3, GTK3, and pyVLC.

It has been developed for GNU/Linux systems and its look and behavior is pretty similar to one of the [Banshee Media Player \(http://banshee.fm/\)](http://banshee.fm/) .

Unless you want to try experimental software or contribute to the project you should not yet use it. You can find more information about this at the [installation page](#).
